much more.**

NRMCA MEMBERSHIP

For Contractors

Membership in the National Ready Mixed Concrete Association affords you many benefits. Join today to connect with ready mixed concrete producers, get involved, and strengthen the concrete industry.

A team of professionals ready to help you!

NRMCA members consider the association's professional staff as an extension of their own. Our experts in promotion, educational development, environmental compliance, plant operations, fleet management, safety issues, legislative action and engineering technology are all just a phone call away!

National promotion grows the pie...

NRMCA's National Accounts program helps ensure that concrete's many advantages are fully understood by large companies who have the potential to specify concrete. NRMCA's national field promoters have developed relationships with scores of top developers, owners, engineers and others. The measurable results mean more concrete specified and more concrete poured. Membership support is what makes this vital program possible.

Advocacy at the Federal level looks out for industry interests.

Without strong representation before national lawmakers, the ready mixed concrete industry could be left behind in the shuffle for federal dollars. NRMCA's professional staff of lobbyists is dedicated to securing favorable legislation that will increase opportunities for ready mixed concrete producers.

Valuable educational tools, certifications and more...

For over 25 years, NRMCA's Concrete Technologist Certification, or "Technical Short Course," has provided industry personnel with quality training on concrete and aggregates technology, followed by testing for ACI Grade I Field Testing Technician and ACI Flatwork Technician certifications. Membership in NRMCA also means low member prices on NRMCA's comprehensive library of concrete technology, promotion and other publications, including NRMCA's famous Concrete in Practice (CIP) series. CIP provides 42 one-page information sheets on important technical topics, written in a non-technical "What, Why and How?" format. Use them as part of your educational plan to ensure quality and value.

Your voice on codes and standards.

Without strong representation on codes and standards setting bodies, concrete could lose market share. NRMCA's participation on all major standards and codes committees counters the aggressive tactics used by the interests of steel, wood and other construction materials. Codes and standards are the backbone of this industry and NRMCA plays an integral part in designing concrete's future.
