

NRMCA Concrete Carbon Calculator:

How to Reduce, Quantify,
and Specify Carbon

Division 03 Section 033000 Cast-In-Place Concrete

Step #1:

Performance-Based
Improvements

Step #2:

Carbon Accounting
and Targets

SECTION 033000 - CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes cast-in-place concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, and finishes, for the following:
 1. Footings.
 2. Foundation walls.
 3. Slabs-on-grade.
 4. Suspended slabs.
 5. Concrete toppings.
 6. Building frame members.
 7. Building walls.

The drawing page contains the following sections:

- STRUCTURAL NOTES:** A large block of text providing detailed instructions and specifications for the cast-in-place concrete work.
- STRUCTURAL DESIGN VALUES:** A table listing various design parameters and their corresponding values.
- ABBREVIATIONS:** A list of abbreviations used throughout the drawing, such as 'ACI' for American Concrete Institute and 'ASTM' for American Society for Testing and Materials.
- STRUCTURAL OBSERVATION:** A section for recording observations during the construction process.
- SYMBOLS:** A list of symbols used in the drawing to represent different materials and components.

Applications of specially
grade concrete floor
mix process,
ensuring reinforcement
grade,
bar operations,
slabs,
concrete pavement and
one or more of the
and granulated blast-

Step #1 – Performance Based Improvements

Goal:

Prescription  Performance

Methods:

- Emphasize ACI 318 Exposure Classes
- Alt testing for durability/design
 - shrinkage, MOE, RCP, ASR
- Expand acceptable materials
- Extended strength development

Results:

Efficient and Optimized Mix Designs

Guide to Improving Specifications for Ready Mixed Concrete

With Notes on Reducing Embodied Carbon Footprint

2021

© 2021 National Ready Mixed Concrete Association
All rights reserved

Performance Specs

They allow for sustainable mix designs, but don't require it!

If you don't ask for sustainability, it's unlikely you'll get it.

Step #2 – Carbon Accounting and Targets

Goal:

Trigger the use of low carbon materials

Methods:

- Collect EPDs
- Establish a Carbon Budget

Results:

- Procurement of low carbon concrete
- Flexibility for the contractor and producer
- Buffer for as-built conditions

Specifications for Sustainability

Collaborative carbon budget **vs.** GWP limit per mix class

Preferred

Carbon Budget – Process

- 1. Concrete Volume Takeoff + Compressive Strengths**
- 2. Identify Benchmark Impacts or Targets Per Mix**
 - NRMCA Regional Benchmarks, GSA, CalGreen, etc.
- 3. Identify Proposed Mix Design Impacts with Lower GWP**
 - NRMCA Industry Wide EPD Mixes – Varying Cementitious
 - Product Specific EPD Mixes from a Concrete Producer
 - Calculate Impact of Proposed Mix Proportions with NRMCA Tool
- 4. Calculate and Compare Total Impact for Benchmark and Proposed Scenarios**
- 5. Carbon Budget: Proposed Low Carbon Concrete Scenario + Buffer**
 - List in specs as a cumulative and/or weighted average target
 - See NRMCA Specification Guide

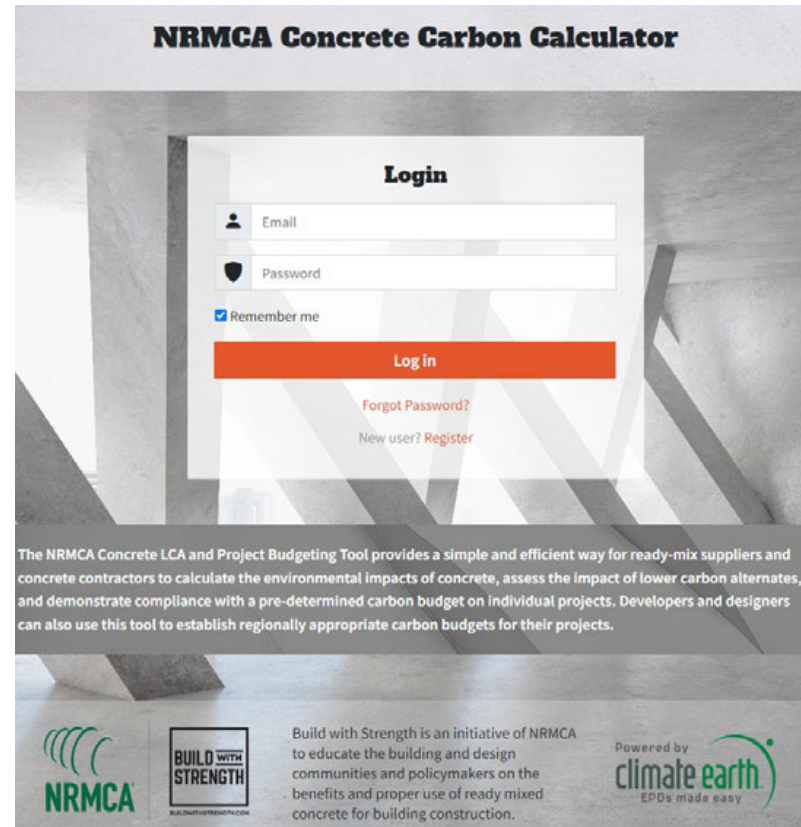

NRMCA Concrete Carbon Calculator

NRMCA's Carbon Tool can Simplify the Process

1. Automatically populates benchmark impacts
2. Calculates estimated carbon sequestration of the concrete through the life cycle of the structure
3. Generates a report documenting the anticipated reduction a low carbon concrete project can expect compared to the benchmark

The NRMCA Concrete LCA and Project Budgeting Tool provides a simple and efficient way for ready-mix suppliers and concrete contractors to calculate the environmental impacts of concrete, assess the impact of lower carbon alternatives, and demonstrate compliance with a pre-determined carbon budget on individual projects. Developers and designers can also use this tool to establish regionally appropriate carbon budgets for their projects.

  Build with Strength is an initiative of NRMCA to educate the building and design communities and policymakers on the benefits and proper use of ready mixed concrete for building construction.

Powered by  climate earth
EPDs made easy

What is a Carbon Budget?

- Project-wide goal instead of GWP limits per class of concrete
- Allows the contractor and producer to adjust mixes as needed to fit material, environmental, and schedule demands
- Larger reductions in foundations and other vertical members, smaller reductions in high early and fast-paced members
- Flexibility prevents coordination issues
- Same overall carbon reduction

	40-45% Fly Ash	6000-40-FA
	30-35% Fly Ash	6000-30-FA
	20-25% Fly Ash	6000-20-FA

How to Use This Table

NRMCA members participating in this project may use Table 1 to claim compliance with EN12620. Most products proposed for a project will likely not have the precise specified compressive strength and proportions listed in this EPD. One can use Table 1 to classify a proposed product to match one of the products listed in the EPD as follows:

Step 1: Identify the 28-day specified compressive strength of the proposed product and the percentage of fly ash and/or slag cement (e.g. 100 x fly ash quantity / total cementitious materials quantity).

Step 2: In Table 1 identify the specified compressive strength range that captures the specified compressive strength of the proposed product (Column 1).

Step 3: Within that specified compressive strength range row, identify the SCM percentage range that matches the SCM percentage of the proposed product (Column 2). For binary mixes (mixes containing Portland cement, fly ash and slag cement) between 20% and 49% SCM (fly ash plus slag percentage) take the largest percentage of either fly ash or slag cement and use that value to select the SCM range to use. For example, if the proposed mix has 35% fly ash and 6% slag cement, use the 40-49% slag range.

Step 4: In that row, move to Column 3 to identify the product name that can be used to look up the life cycle impacts listed in Tables 6 through 11a for either 1 cubic meter or 1 cubic yard of product. Reference this EPD and the "Product Name" listed in column 3 in any compliance statement/labeling (e.g., weight bill) accompanying the product.

4

Environmental Product Declaration

The NRMCA Concrete LCA and Project Budgeting Tool provides a simple and efficient way for ready-mix suppliers and concrete contractors to calculate the environmental impacts of concrete, assess the impact of lower carbon alternatives, and demonstrate compliance with a pre-determined carbon budget on individual projects. Developers and designers can also use this tool to establish regionally appropriate carbon budgets for their projects.

Build with Strength is an initiative of NRMCA to educate the building and design communities and policymakers on the benefits and proper use of ready mixed concrete for building construction.

Proposed Mix GWP for 'Mat Foundation'

Important information

This result is NOT an EPD. This GWP was calculated using the same LCI data sources as prescribed in Table A1 of the PCR for Concrete, NSF International, August 2021 v2.1. A3 is assumed to be 9.04 kg CO₂e/m³ per NRMCA's Benchmark Report v3.2. This GWP is strictly an estimate and is based on industry averages, regional data, and average transportation impacts and should be used for estimation purposes only. For more accurate results, it is recommended that a Type III Third-Party Verified Product Specific EPD be developed.

For a more accurate plant specific estimate, use your EPD tool provider's EPD estimator.

						5,381,671.2	4,139,701.6	-23.08%	-167,333.1

This report was generated using the NRMCA's Concrete Carbon Calculator, powered by Climate Earth. The results of this analysis indicate that an estimated -23.08% reduction in embodied carbon could be achieved for the concrete scope on Residential Tower - Boston*. The baseline used to calculate this reduction is based on NRMCA v3.2 Eastern.

*This study includes the following life cycle stages.

Recommended Specification Additions:

Section 033000 - CAST-IN-PLACE CONCRETE

Part 1 - GENERAL

1. - Related Documents

A. The basis for designing concrete mixtures and demonstrating compliance with carbon budget targets shall be in accordance with:

- National Ready Mixed Concrete Association (NRMCA) Cradle-to-Gate Life Cycle Assessment of Ready-Mixed Concrete Manufactured by NRMCA Members – Version 3 (or later).
- National Ready Mixed Concrete Association, NRMCA Member Industry Average EPD for Ready Mixed Concrete – Version 3 (or later).

2. - Summary

A. Embodied Carbon Footprint Goals

- This project has a goal of reducing the embodied carbon footprint relative to a benchmark or typical project by **XX %**. To accomplish this goal, the **target carbon footprint reduction for concrete is 20% below the benchmark** established in the NRMCA Cradle-to-Gate Life Cycle Assessment of Ready-Mixed Concrete Version 3 (or later). Specific targets for Global Warming Potential (GWP) are provided in Section 2, CONCRETE MIXTURES. It shall be permitted to propose innovative products and manufacturing processes for approval by the Engineer of Record. Proposed alternatives shall meet all performance criteria for strength, durability, and constructability, and achieve the required reduction in carbon footprint.

1.5 - Action Submittals

A. Embodied Carbon Footprint Submittals

- Plant specific Environmental Product Declaration (EPD) for each concrete mixture proposed for the project accompanying each concrete mixture submittal
 - It shall be permitted to substitute plant-specific EPDs with those listed in NRMCA Member Industry Average EPD for Ready Mixed Concrete if the proposed mixtures are similar to those listed and the concrete producer participated in providing data for the NRMCA Cradle-to-Gate Life Cycle Assessment of Ready-Mixed Concrete.
- A calculation showing that the Global Warming Potential (GWP) of all the concrete supplied for the project shall be lower than the GWP target set in Section 2.

Concrete Budget Report

Recommended Specification Additions (continued):

1.7 - Quality Assurance

A. Ready Mixed Concrete Manufacturer Qualifications: A company manufacturing ready mixed concrete who complies with ASTM C94/C94M requirements for production facilities and equipment

- Concrete shall be supplied from concrete plants with current certification under the NRMCA Certification of Ready Mixed Concrete Production Facilities, certification or approval by a state or highway agency or equivalent. Criteria of equivalent certification shall be included in the submittal.
- Quality Control personnel with responsibility for concrete mixtures shall document qualifications demonstrating knowledge and experience with concrete technology and development of performance-based concrete mixtures, certified as an NRMCA Concrete Technologist Level 2, or equivalent. Details covered in equivalent certification program shall be documented in the submittal.
- When requested, the manufacturer shall furnish a Quality Plan
- Documentation that the concrete supplier participated in supplying data to the NRMCA Cradle-to-Gate Life Cycle Assessment of Ready-Mixed Concrete.

Part 2 - PRODUCTS

2.11 - Concrete Mixtures

A. Embodied Carbon Compliance

- Provide documentation that the total GWP of all proposed concrete on the project is less than or equal to **5,785,000 kg of CO2 equivalents or a weighted average of 241 kgCO2e/yd3**.

Qualifications (continued):

A company manufacturing ready mixed concrete who meets the requirements for production facilities and equipment. Concrete plants with current certification under the NRMCA Concrete Production Facilities, certification or approval by a state or other authority of equivalent certification shall be included in the submittal. Responsibility for concrete mixtures shall document qualifications, experience with concrete technology and development of performance as an NRMCA Concrete Technologist Level 2, or equivalent. Details of the program shall be documented in the submittal. Supplier shall furnish a Quality Plan. Supplier participated in supplying data to the NRMCA Cradle-to-Gate Mixed Concrete.

Total GWP of all proposed concrete on the project is less than or equal to the baseline or a weighted average of 241 kgCO2e/yr³.

www.BuildWithStrength.com

5. Establish Carbon Budget

Project	Project GWP (kg)	Weighted GWP (kg/yd ³)	GWP Reduction
Benchmark Mixes	5,382,000	301	0
Proposed with Fly Ash and Slag Mixes	4,140,000	232	- 23%
Establish Carbon Budget	4,300,000	240	- 20%*

* Consider added buffer/tolerance

Set Targets for Carbon Footprint

Concrete Materials:

A. Supply concrete mixtures such that the total Global Warming Potential (GWP) of all concrete on the project is less than or equal to **4,300,000 kg** of CO₂ equivalents or a weighted average of **240 kgCO₂e/yd³**
